Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,4,5,9,11,12,13,14,16,17,18 are rejected under 35 U.S.C. 102(e) as being anticipated by Swick et al. (6,694,240).

Swick et al. discloses a work machine including a connectable implement (considered the engine) having operating characteristics with a predetermined operational range consisting of a plurality of values (normal engine speed & reduced engine speed), an electronic module 24 attached to the work machine, a conducting device 48, and signal means 44. Concerning claim 17, the value is considered forward facing normal operating conditions, with the second value considered rearward facing operating conditions which activates the engine speed reduction algorithm. Concerning the claimed method steps, given the structure of Swick et al., the claimed method steps would be inherently performed during the assembly and use of the work machine of Swick et al. Concerning claims 4,12,13,14,18, a change in engine speed inherently affects the hydraulic system including pump speed, which controls hydraulic flow and pressure.

Allowable Subject Matter

Claims 2,3,6,7,8,10,15,19,20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of record discloses various work machines and control systems.
